

# PastaBin

TAliB Semestr 6

Wojciech Kubowicz, Damian Barczak, Maciej Wielgosz

#### Opis projektu

Celem projektu jest napisanie aplikacji internetowej umożliwiającej dzielenie się tekstem oraz zdjęciami za pomocą krótkiego wygenerowanego kodu dostępu. Ma ona możliwość zalogowania się w celu dostępu przez użytkownika do jego utworzonych "Past" i zarządzania nimi.

# . Diagram ERD - Ostateczny

# . Architektura aplikacji

## Generowanie kluczy Past

```
public class KeyGenerator
           private const string AllowedChars = "abcdefghijklmnopqrstuvwxyzABCDEFGHIJKLMNOPQRSTUVWXYZ0123456789";
           private const int KeyLength = 16;
           public static string GenerateKey()
               char[] key = new char[KeyLength];
               byte[] randomBytes = new byte[KeyLength];
               using (var rng = RandomNumberGenerator.Create())
12
13
                    rng.GetBytes(randomBytes);
14
15
               for (int i = 0; i < KeyLength; i++)</pre>
16
17
                   key[i] = AllowedChars[randomBytes[i] % AllowedChars.Length];
18
19
               return new string(key);
21
22
23
```

## . Automatyczny kod usuwania Past

```
1 // Add Quartz.NET
2 builder.Services.AddQuartz(q =>
       q.UseMicrosoftDependencyInjectionJobFactory();
       q.AddJob<DeleteExpiredSharingJob>(group => group
            .WithIdentity("deleteExpiredSharingJob"));
       q.AddJob<DeleteExpiredPastaTxt>(group => group
10
            .WithIdentity("deleteExpiredPastaTxtJob"));
11
12
       q.AddJob<DeleteExpiredPastaGroups>(group => group
13
            .WithIdentity("deleteExpiredPastaGroupsJob"));
14
15
       q.AddJob<DeleteExpiredPastaImg>(group => group
16
           .WithIdentity("deleteExpiredPastaImgJob"));
17
18
       q.AddTrigger(trigger => trigger
19
            .WithIdentity("deleteExpiredPastaGroupsJobTrigger")
20
            .ForJob("deleteExpiredPastaGroupsJob")
21
            .StartNow()
22
            .WithSimpleSchedule(schedule => schedule
23
                .WithIntervalInMinutes(15)
24
                .RepeatForever()));
```

```
q.AddTrigger(trigger => trigger
           .WithIdentity("deleteExpiredPastaImgJobTrigger")
           .ForJob("deleteExpiredPastaImgJob")
           .StartNow()
           .WithSimpleSchedule(schedule => schedule
               .WithIntervalInMinutes(15)
               .RepeatForever()));
       q.AddTrigger(trigger => trigger
10
           .WithIdentity("deleteExpiredSharingJobTrigger")
11
           .ForJob("deleteExpiredSharingJob")
12
13
           .WithSimpleSchedule(schedule => schedule
14
               .WithIntervalInMinutes(15)
15
               .RepeatForever()));
16
17
       q.AddTrigger(trigger => trigger
18
           .WithIdentity("deleteExpiredPastaTxtJobTrigger")
19
           .ForJob("deleteExpiredPastaTxtJob")
20
21
           .WithSimpleSchedule(schedule => schedule
22
               .WithIntervalInMinutes(15)
23
               .RepeatForever()));
24
25 });
```

### Klasa odpowiedzialna za usuwanie Past

```
public class DeleteExpiredPastaTxt : IJob
            private readonly PastaBINContext _dbContext;
            public DeleteExpiredPastaTxt(PastaBINContext dbContext)
                _dbContext = dbContext;
            public async Task Execute(IJobExecutionContext context)
11
12
13
                    var expiredPasta = await dbContext.PastaText
15
                        .Where(pgs => pgs.DeleteDate < DateTime.Now && pgs.DeleteDate != null)
                        .ToListAsync();
17
                    _dbContext.PastaText.RemoveRange(expiredPasta);
19
                    await _dbContext.SaveChangesAsync();
20
21
                    Console.WriteLine($"Deleted {expiredPasta.Count} expired PastaText records at {DateTime.Now}");
22
23
                catch (Exception ex)
24
25
                    Console.WriteLine($"Error deleting expired PastaText records: {ex.Message}");
26
27
28
```
